GLOSSARY37

Introduction

Customer reads from the TD SYNEX Web Site:

Secure File Transfer Protocol (SFTP)

TD SYNEX has available a file containing a daily price & availability catalog for its customers to download.

This information is placed on an TD SYNEX hosted SFTP server and customers will be provided an SFTP address, user name, and password to retrieve daily Price & Availability catalog updates.

To request setup and access to your Price & Availability catalog file, please contact your TD SYNEX sales representative.

The TD SYNEX Price & Availability "Flat File" is available to any customer who meets the minimum requirements, as follows:

- Has an active & unrestricted TD SYNEX Account Number.
- Once activated, customer actively downloads their P&A Catalog File from the SFTP Server (minimum once per week).
- After 6 months, customer maintains a minimum \$10k/quarter in sales with TD SYNEX

Steps that Customer and TD SYNEX make to Request and Process the SFTP Price & Availability "Flat File":

1. **Customers must request from their TD SYNEX Sales Representative access to the nightly P&A file service.**
2. The TD SYNEX Sales Rep will qualify their customer based on the requirements above, and submit an email request to their Sales Manager for approval, and subsequent release to the B2B_Customer@tdsynex.com email group for processing.
3. The process takes approximately 1-2 business days due to the customization of each customer's file (unlike other suppliers who provide generic shared files w/ inflexible pricing). The TD SYNEX sales rep will notify customer via email when the SFTP login credentials are ready, along with directions where to download it from.
4. **Please note: Images and technical notes are not available (you can ask 3rd Party Image Content Providers, i.e. CNET, Etilize, etc.)**

The following "**File Filters**" are available, upon request:

- Zero Stock Inventory Filter (All skus with zero stock on-hand will be filtered out.)
- Delta vs. Full File Filtering (Only skus that have changed since the last file run will be updated.)

Also available to customer as an alternate to the "P&A Flat File" format are the following file options:

- ANSI X.12 832/846 format
- XML (Real Time) Query Only Tool

Please Note: A combination of this Flat File service and integration of the XML P&A Query tool are recommended for businesses creating Online Web Ordering tools or Web - or Cloud - based Storefronts.

The Flat File format (APP) is a TD SYNEX proprietary format, it is designed for customers needing to have more data content options (the simplest option), in addition to EDI X.12/EDIFACT format or XML. This is the recommended format for customers (especially SME - Small and Medium Enterprise businesses) who want to quickly connect to TD SYNEX without spending significant amounts of resources and time in deployment of EDI or XML services.

This spec is also used for TD SYNEX internal support usage, because EDI 832 & 846 data files are translated directly from this APP format before translation into EDI x.12 / EDIFACT standard content.

TD SYNnex P&A Structure

HDR Record

Legend -

AN – Alphanumeric	ID – Single Value Code
DT – Date / Time	N2 - Numeric - Fixed Length (2 Digit)
N – Number	

Data Note: File is in a Variable length text file format, with “~” delimited fields.

Additional Note: File can be re-named with a .txt extension without affecting data layout for customers importing the file into database tools such as Microsoft Access, or other relational data base software.

Please Note: Data Example Columns listed below are represented by the data example for the file layout provided at end of this document.

Field ID	Name	Description	Data Type	MAX Length	Requirement	Data Example	TD SYNnex Internal Use
01	Trading Partner Code	TP Code assigned to customer to provide unique ID for process.	AN	10	M	SAMPLE846	
02	Header Record ID	Code used to designate Header Portion of file:“HDR”	AN	3	M	HDR	
03	Current Date	File Creation Date	DT	6	M	150706	
04	Current Date	File Creation Date	DT	6	M	150706	
05	File Qualifier	“U” = Delta File, “C” = Full File	ID	1	M	C	
06	Reserved	Reserved for Future Enhancements	AN	10	O	N/A	
07	Reserved	Reserved for Future Enhancements	AN	10	O	N/A

****Please Note:** Warehouse Designation # 6 listed is for US Warehouses participating in Joint US/Canada Warehouse program. Quantity listed represents total on-hand for all participating warehouses. Please contact your TD SYNEX sales rep if you need additional information.

Glossary

ANSI X.12 832/846 – Also known as **EDI**, an industry standard for electronic data interchange or communication between medium to large companies. EDI 832 and EDI 846 are price file formats, which provide pricing level and stock level information. Other EDI services include EDI 850 (Purchase Orders), EDI 855 (PO Confirmation), EDI 856 (Shipment Notice), EDI 810 (Invoicing), and others.

Contract Price – Also known as Grid Price. Pricing assigned to a specific TP Code or Customer. Pricing is assigned by the TD SYNEX Sales Rep and Sales Manager for each account.

SFTP- Secure File Transfer Protocol. A free method of downloading data from a company web server for use by customers via the Internet. Please Note: Customer will require an SFTP client such as Filezilla (freeware) to access file service via SFTP, as browsers no longer support SFTP via browser access due to new security guidelines.

Trading Partner – A unique ID or Code assigned to identify ownership for a file or data set.

UPC Code – Universal Product Code, the bar code assigned to a specific product, which is unique and non-transferable to other products. UPC Code specifications, and a UPC Code test site can be accessed by visiting http://www.upc-council.org/main/ID_Numbers_and_Bar_Codes.html.

UNSPSC Code – United Nations Standard Products and Services Code, the categorization code assigned by the Global International community to classify products into specific product groups, and can accessed by visiting <http://www.unspsc.com/>.

XML – eXtensible Markup Language, also known as API, an emerging programming language with roots in HTML (Hyper Text Markup Language) used originally for web site development. XML is a fast, zero cost means of sending and receiving data over the internet, which can be used in many web page applications without the need to utilize costly or expensive web site development. XML services include Purchase Order status and submission, Ship Notice / Shipment Tracking information, Invoice retrieval, Real Time Price and product Availability.
